

G882-DIGITAL Console Program Data Sheet

To accompany the Digital Accessory board Geomatrix developed a simple console for managing active channels, zeroing the depth measurement (Null), and programming the instrument baud rate and sample rate.

Click to download the console program

In addition to digitising all auxiliary data channels the service and repair history of the G-882 can be recorded and recalled by assets owners.

- Use the G882 digital console to configure the accessory ports.
- Select the correct com port and baud rate then press connect.
- Activate or deactivate the digital channels using the digital field toggles.
- Null the depth readings using the zero depth button.

- Use drop down commands to toggle the units of measurement and water type.
- Check serial numbers and altimeter type.
